

Thank you for sharing your perspective!

Over the past few weeks, we ran three structured workshops with Product, Sales, and Sales Leadership to evaluate and refine Arrive’s 2-year business product vision. The goal was to pressure test an end-to-end future state experience, align on success criteria, and prioritize what matters most to deliver customer and business value.

WHAT WE HEARD

1. There was strong alignment and momentum around the vision.

The vision was consistently received as ‘ambitious yet achievable’ across workshops and survey feedback. The end-to-end narrative helped teams see the product as a cohesive business journey, creating momentum and alignment around a shared direction.

2. Value beyond parking was seen in broader mobility capabilities.

Mobility cards, telematics, and tolling automation were viewed as important capabilities that extend the offering beyond parking. Together, they support a shift toward a broader mobility platform tied to real-world operations.

3. Arrive needs to meet customers in their existing ecosystems.

Integrations were seen as essential to making Arrive feel embedded within real customer environments rather than another standalone tool. Connecting with expense, fleet, HRIS, and identity systems, including SSO for enterprise authentication, enables Arrive to operate as part of a broader ecosystem, supporting seamless, self-serve data exchange and long-term adoption.

4. Flexible, self-serve onboarding is critical to success.

Participants emphasized minimizing manual setup, supporting different enterprise configurations, and enabling employees to opt-in easily at scale.

5. Success must extend beyond onboarding to retention.

Leadership emphasized designing for the full customer lifecycle. Reducing churn, supporting growth from micro to enterprise, and being intentional about re-engaging customers were seen as critical to long-term success.

6. Priorities and needs vary by market.

Some capabilities such as *EV charging* and *setting parking restrictions* were prioritized differently across markets. These discussions highlighted the need for a thoughtful, market-aware approach rather than a one-size-fits-all solution.

PROTOTYPE FEEDBACK

Across all 3 workshops, participants provided detailed feedback on the vision prototype, reviewing each screen and flow to identify what worked, what raised questions, and what may need refinement. This feedback has been organized and layered with synthesis and recommendations to support next-step decision-making. [View prototype feedback](#)

WHAT’S NEXT

We will continue refining the vision and prototype based on this internal alignment. The next step is to share the vision with prospective and existing B2B customers to understand how it resonates externally, where it creates value, and where it needs further refinement.

Thank you again for your contributions! Your perspective is shaping the future direction for Arrive.
